

Forcefield Wins again! RiDE Magazine February 2007

Yet again Forcefield Body Armour has come out on top in an independent impact test carried out by RiDE magazine. (February 2007 Edition). This adds to a growing number of magazine articles in which Forcefield wins.

In a thorough investigation into the quality of body armour available in the shops today, they found Forcefield to be at least 50% better than the CE standard pass rates. Now is the time to upgrade your armour???

Some quotes from RiDE magazine-

~2006 Forcefield Armour; top performer in our investigation~

~Forcefield Armour, selling a new kind of armour made from PVC Nitrile which is the stuff that did so well in our investigation. This material has good shock absorbing qualities and is very pliable and so can provide a good contoured fit. A (Forcefield) back protector made from PVC Nitrile won Best Buy in RiDEs 2005 test~

Key points to the range are ?

Comfortable

Breathable

Flexible and non-restrictive

Multi-Impact (will not loose its strength half way through a crash).

Both the Back protector and Armour Pieces have been proven to offer the best protection in impact tests, both here, Sweden and Germany! It is the best you can buy!
